Iteration 3: Homework 2

- Write and Test CommandHardware_SendError
  - It can call CommandHardware_SendResponse
  - Since they are in the same module, SendResponse can't be mocked… so your tests will need to be more complete. (They won't know if you are calling SendResponse or not, which is as it should be)
- Write and Test Packer_AddMsg
  - Did you verify all incoming data and return NULL if they are invalid?
  - Are you sure that you're never going to overrun your buffer?
